

Using The Slide Show Program

Slide Shows

I used My SlideShow to create the slide show. You can click this link: <http://www.anixsoft.com/> to learn more about the program. To play a slide show, press a text button on the autorun menu. You will have three options to view photos:

1. Filmstrip--Displays the current photo in a larger window and a thumbnail view or small view of the next 8 photos below. Clicking on the thumbnail will automatically enlarge the photo.
2. Previews--Show the entire photo album with small thumbnails. Double click on a photo to enlarge the image. At the bottom of the photo, you will find a description of the photo that includes the photo name. Use the scroll wheel on your mouse or the left and right arrow keys on your keyboard to turn to the next or previous photo.
3. Slide Show--plays the still photos with music. The slide show will fill the screen and automatically show the photos with music.

Printing Photos

You will not be able to print from the slide show. Usually there is a link for printing on the page where you downloaded this file. If not, contact me by email using the link below

If you have questions, drop me an email here: louisd@hearingoffice.com
